

GENERATING EQUIPMENT

Mid-America Engine Power Generation Equipment

Mid-America specializes in the non-traditional secondary market—the buying and selling of surplus power generating equipment. Mid-America maintains an inventory ranging from 15 to 3,000 KW so it can offer a full range of low hour, high quality, used power generation equipment, including engine-driven generator sets, switchgear and transfer switches.

O'Brien Energy Services Power Generating Equipment

Generators are O'Brien's only business. Whether you need standby, demand side management or base-load management, O'Brien can keep your costs low with a choice of pre-packaged, new or reliable reconditioned equipment. Unlike some companies, O'Brien is not tied to a particular engine or generator line so you get the right combination designed specifically for your application.
